

Basic science
Unit - 1 Food for health

1. Which are the major nutrients?
2. Why do we eat nutrient food?
3. Which nutrients provide energy for different physiological activities?
4. What are the different forms of carbohydrates?
5. Name the test ,to detect the presence of starch in food items?
6. Write some examples for millets?
7. Which nutrient is essential for the growth of the body?
8. Which are the food items rich in protein?
9. Which nutrient is required for the health of hair?
10. In the absence of carbohydrates, which nutrient provides energy for our body?
11. How did you understand the presence of fat in food items?
12. What is cholesterol?
13. What are the things to be careful of control cholesterol?
14. Which are the two types of vitamins?
15. Complete table given below

Nutrient	Deficiency Diseases
Protein	—————
—————	Night blindness
Vitamin C	—————
—————	osteoporosis
Iron	—————
—————	Rickets
—————	Mouth ulcer/Glositis

Iodine	-----
-----	Haemorrhage

16. Name the hormone produced by the thyroid gland?
17. What are the symptoms of night blindness?
- 18 Which vitamin is required for the health of teeth and bone?
19. Which mineral is required for the health of teeth and bone?
20. Why is it said that we should eat food items which contain fibre?
21. What is haemoglobin?
22. What is the function of haemoglobin?
23. Which are the food items rich in fibre?
24. We must drink plenty of water ,why?
25. What is a balanced diet?
26. Arrange the nutrients, as needed our body from the food
?(ascending order)
27. What is calorie?
28. What are the things to be careful of to prevent loss of nutrients while cooking?
